

Education

Cornell University		3.8 GPA Expected May 2027		Coursework:	
Bachelor of Science in Information Science		Choices and Consequences in Computing		Object-Oriented	
Concentrations in UX Design, Interactive Technology		Designing Technology for Social Impact		Programming	
Minors in Computer Science, Game Design		Introduction to Machine Learning		Networks	

Experience

Product Design Intern at AlgoLink	- Collaborated with a team of 6 designers in a startup company to extend a recruitment platform from 1 → 2 by adding evaluation and allocation features to improve AI model performance, increasing investor interest by 50% - Designed and iterated on 4+ core product features from 0 → 1, including a job feed, messaging, and profile pages to match job candidates and recruiters - Contributed 10+ components to the design system for consistent branding and development
Product Designer at Bump Platforms	- Sole product designer in a startup developing Chance, a location-based dating app to bring real, in person connection to online dating - Ideated directly with founders to analyze product viability in the market, involving 6 competitive analyses, 4+ user interviews, and weekly discussion with software and business teams, which resulted in 2 full product iterations to accelerate product timeline by 20% over 1 year
Teaching Assistant for Introduction to Game Development course	- Revived and redesigned a series of 8 design lectures on advanced topics including animation basics, character design, and UI/UX design, and taught to 10+ students Identified and mediated conflict in a team of 6 students surrounding insufficient communication between designers and programmers, resulting in a successful final submission - Assisted 40+ students in discussion sections covering the design process from ideation to final release, including critique sessions, user playtesting, and 1:1 design advice

Projects

Lead Product Designer at Combat Robotics @ Cornell Project Team	- Led a team of 5 designers in a complete website redesign to modernize branding, including a new design system with 20+ components for efficient implementation, increasing applicant count by 23% - Conducted 10+ user interviews to understand shortcomings of the site, and reformatted information hierarchy to tell the story of the team’s history and culture to attract applicants - Implemented designs in a team of 6 developers using JavaScript, TypeScript, React, and Material UI, with complete mobile support and interactive design
Front-end Developer at uTECH	- Worked with 2 designers to design/implement CATalyzer, a desktop page-based emission calculator to help transportation companies reduce environmental impact - Implemented all 20+ pages of the new software using Javascript, Material UI, and React - Communicated with project leads and designers on page revisions, resulting in a 2x increase in usability and user retention
New Member Training Lead at Combat Robotics @ Cornell Project Team	- Managed the restructuring of a 3 week subteam-specific training curriculum covering front-end development, business, and marketing within a team of 3 developers and 2 project managers - Redesigned a 3 week engineering training program to integrate key business concepts for more well-rounded onboarding - Provided hands-on support at team/subteam-specific sessions for 20+ new members

Skills

Design			Programming			
Figma	Adobe Photoshop	User Research	JavaScript	React	Python	Git/Github
FigJam	Prototyping	Iteration	TypeScript	Material UI	C#/C++	Java
Notion	Design Systems	Procreate	HTML/CSS	Tailwind CSS	OCaml	Numpy/SQL
